

## MAXIN

Maximal Invasive Techniques in Emergency Medicine

## THE COURSE

With technical advances there are increasingly more invasive techniques available to treat and resuscitate critically ill or seriously injured patients. MAXIN is a unique 2-day course aimed at learning and performing these invasive techniques by using simulators and specially prepared recirculated human specimens.

## TOPICS

During the MAXIN course participants will learn and perform invasive life-supporting techniques such as invasive surgical airway maneuvers, difficult vein access, the REBOA maneuver, ECLS-ECMO and resuscitative thoracotomy.

## PROGRAM

The workshop takes place on 2 consecutive days. The first day is mainly focused on acquiring basic knowledge.

Also there will be room to practice on the simulator. The second day participants will get the chance to perform all covered invasive techniques on specially prepared recirculated human specimens.

## COURSE LOCATION & PARTNER

MAXIN International is a cooperation between NAW Berlin/Germany and Emergency Department of Leiden University Medical Center/ The Netherlands. The course location is Berlin/Germany. Course will be held in English.
